

Pikkula and Ekopikkula chamber pots

Manual

Pikkula and Ekopikkula are easy-to-use portable and light chamber pots for many many kinds of temporary uses. There are two ways for the use:

- A. You can use the toilet without protective bags and bedding when you empty the container daily.
- B. If you rather empty the container less often, eg. every 2-4 days, it is good to use some dry material like pellets in the container to bind liquid and odors. Also biodegradable bags can be used for easier emptying. A suitable amount of bedding material is about 1-2 dl per visit.

NOTE!

When emptying the toilet, remove the white seat by lifting from one side only directly upwards.

It would be best to do this in room temperature, as cold plastic is prone to cracking.

The best way to handle the toilet waste is to compost it.
