

GREEN TOILET

100 Easy

 **Pikkuvihreä**

GREEN TOILET 100 EASY IS AN EXCELLENT COMPOSTING TOILET

As its name suggests, the Green Toilet 100 Easy is a composting toilet with good capacity that can be easily installed directly on the floor. It combines the well-known advantages of Pikkuvihreä's Green Toilets: an efficient separating structure, easy servicing with exchangeable inner rings, and the possibility of batch composting with an additional spare container.

Green Toilet 100 Easy is suitable for use both in an outhouse and indoors. In the Easy model, all waste goes into the same container, while the proven base structure characteristic of Green Toilets separates excess liquid from the compost mass. This ensures odor-free operation and allows the composting process to begin already during use.

Familiar and easy to use!

In the Easy model, all waste goes into the same composting container, making the toilet simple and intuitive for everyone to use – without the need for separate instructions.

Efficient separation!

In the Easy model, urine is separated using the proven intermediate base structure. This keeps the toilet 100% odor-free and ensures efficient composting.

More capacity & easier maintenance with a spare container!

Green Toilet 100 Easy is suitable for seasonal use by 4–5 people, for example at a summer cabin, and for year-round use by 2–3 people. Like other Green Toilets, the Easy model is available with an optional spare container, allowing you to increase capacity as needed and making maintenance even more effortless.

Would white suit your space better?

Green Toilet Easy is also available in a white version with a plastic seat. This model often blends more naturally into indoor environments.
